

Contract Pocket System + Components

Seamlessly hides large window shades on 3 sides for a polished look.

DFB offers 3, 5, & 6 inch pockets. (Conditions of the job determine which pocket is used.)

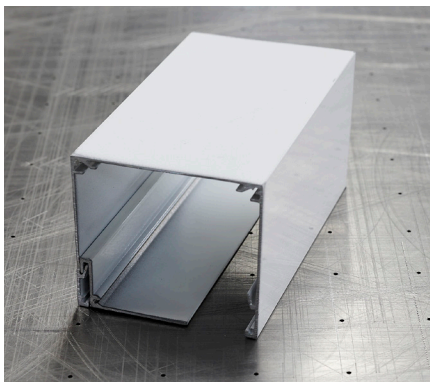

FEATURES & BENEFITS

- Quality design for trouble-free installation.
- Blackout option using side and center channels.
- Provides easy access for repairing and replacing shades.
- Standard Color: White. Custom painting available. Added lead time and costs will apply.

SPECIFICATIONS

Item Description	Dimensions	Use
3" Pocket	3.50" x 3"	Used for manual single shades
5" Pocket	5.625" x 5.30"	Used for motorized single shades
6" Pocket	6" x 9"	Used for piggyback, manual & motorized shades only

DFB offers a variety of optional components depending on the needs of your project. These components are used for aesthetic purposes as well as to protect the shades.

3" pocket

5" pocket

6" pocket

Clip + Enclosure

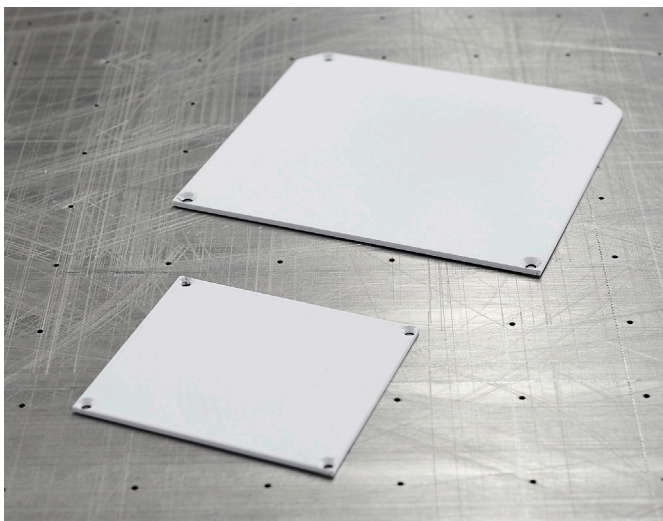

When installing a pocket, we use a Clip & Enclosure (pictured above) to cover the bottom of the shade. Clip & Enclosures attach separately to the Pocket.

- 3" pocket pairs with the 2" Enclosure
- 5" & 6" pocket pairs with the 3" Enclosure
- Clip is the same for both Enclosures

End Plate

3" & 5" End Plates are available to cover both ends of the pocket, for a completely polished look.

Custom End Plates are available for 6" pockets.

Side & Center Channel

Prevents light from entering through the sides of the shades.

Center Channels are two Side Channels placed back to back for total light blockage between two shades.

3" & 5" Valance

Valances are used as an alternative to pockets, and cover the rollershade on two sides.

Used for manual and motorized single shades, or shades that are side by side.
